

Defined process response and decision-time information

```
graph TD; A[Defined process response and decision-time information] --> B[Component comparison<br/>Prediction accuracy<br/>Training size<br/>Extrapolation]; A --> C[Physical assessment<br/>Mass conservation<br/>Non-negativity<br/>Accuracy and cost]; A --> D[Final prediction analysis<br/>Coupling and projection<br/>Local sensitivity<br/>Coefficient stability]; B --> E[Connected operating assessment<br/>Shared streams and stored solids<br/>Mechanistic evaluation at selected controls]; C --> E; D --> E; E --> F[Common research focus<br/>Assessment of the same learned and projected treatment responses];
```

Component comparison
Prediction accuracy
Training size
Extrapolation

Physical assessment
Mass conservation
Non-negativity
Accuracy and cost

Final prediction analysis
Coupling and projection
Local sensitivity
Coefficient stability

Connected operating assessment
Shared streams and stored solids
Mechanistic evaluation at selected controls

Common research focus
Assessment of the same learned and projected treatment responses
